

The 240SS Super Simo On-Board Power Unit *A New Level of Performance!*

240SS Power Unit

INNOVATIVE TECHNOLOGY

Typically a simultaneous power unit draws about 60 amps at inrush. The 240SS requires only about 5 amps to start up with virtually no inrush!

- The design of the 240SS reduces the need for accessibility to the pump unit providing versatility when determining a location for the unit in your apparatus.
- Installs in approximately one day- minimizing installation costs.
- Retrofits on existing apparatus are a practical option

Circuit Control Panel

Optional Wireless Remote

240SS Design & Operational Features

- Electric Power Unit, 240 volt single phase power
- Provides performance virtually the same as the AMKUS Ultimate System
- Two tools can be connected and operated simultaneously
- Can be used with hose lengths up to 200'
- DC fan cooled hydraulic heat exchanger
- Complete on-board circuit panel for: individual motor and circuit activation, LED circuit status display, LCD display for operational diagnostics, integrated low oil warning and low oil shut down
- Uses AMKUS non-toxic mineral base hydraulic fluid
- Optional wireless remote control with emergency shut down
